An intersection defines the equilibrium
Unique equilibrium
p = 5/11
Power (pu)
Trial power p (pu)
0.0
0.2
0.4
0.6
0.8
1.0
Controller output C(V(p))
Output equals trial power
The numerical method can still cycle
Trial power p_n (pu)
Numerical iteration n (not seconds)
0.0
2.5
5.0
7.5
10.0
12.5
15.0
17.5
20.0
Direct numerical iteration
Relaxed numerical iteration, α = 0.5
Same equilibrium
